

OLUSANU EMMANUEL LEKAN

FULL-STACK SOFTWARE ENGINEER

Abuja, Nigeria (WAT / UTC+1) — open to remote | +234 706 753 1320 | olusanuemmanuel@gmail.com
lekantheboy.github.io/my-portfolio | github.com/Lekantheboy

PROFESSIONAL SUMMARY

Full-stack engineer with three years shipping production software across Node.js/TypeScript, React/Next.js and Laravel. Built a multi-tenant white-label Learning Management System end to end — data model, API, interface and deployment — and owns the chart-of-accounts module of an enterprise platform in daily use. Works down the stack into infrastructure: PostgreSQL and MySQL, Redis-backed job queues, Docker, NGINX and PM2 on servers whose security is my responsibility. Recent work spans payment integrations (Monnify, Flutterwave) and AI-assisted product features.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, SQL, HTML, CSS
Frontend	React, Next.js (App Router, SSR), Tailwind CSS, Radix UI / shadcn, MUI, TanStack Query & Table, Zustand, Recharts
Backend	Node.js, Express, Laravel, REST API design, Prisma, Sequelize, Eloquent, Zod / Joi, Socket.io, Swagger / OpenAPI
Data & Async	PostgreSQL (incl. row-level security), MySQL, Redis, BullMQ, node-cron, schema design, migrations, indexing
Infra & Security	Docker & Compose, NGINX, PM2, GitHub Actions, Ubuntu administration, DNS and mail configuration, JWT, OAuth2, RBAC, server hardening
Integrations	Monnify (virtual accounts, disbursements), Flutterwave, Airtel Money, Instagram Graph API, Cloudinary, Brevo, TinyMCE

WORK EXPERIENCE

Full-Stack Software Engineer

Jan 2025 – Present

Bloom Digital Media Ltd — Abuja, Nigeria

- Built a **multi-tenant white-label Learning Management System** end to end — React, Node/Express, MySQL — covering course authoring, assessments, progress tracking, discussions, certificates and payments, and took it from a single-client product to tenants running on their own subdomains and branding.
- Implemented per-tenant host resolution, dynamic theming and tenant-scoped authentication for that platform; integrated Google OAuth, Flutterwave payments and Brevo transactional mail, and migrated all file handling from local disk to Cloudinary without downtime.
- Own the **chart-of-accounts module** of an internal Enterprise Management System (Next.js, Express, Prisma, PostgreSQL) — hierarchical accounts, sub-account types, pooled accounts, manual journal entries and void handling — and delivered its **recruitment/ATS** and **knowledge base** modules with real-time notifications over Socket.io.
- Scaffolded a **social-media automation platform** (Next.js 16 / React 19; Express, Prisma, BullMQ): tenant isolation through PostgreSQL row-level security, scheduled Instagram publishing with idempotency guards and automatic token refresh, and AI-generated captions and branded imagery.
- Build and maintain a Laravel **advertising services platform** — client wallets, funding, invoicing, withdrawal approval with daily limits and account-name verification, and a scheduled FX-rate sync that keeps cross-currency billing correct — alongside client Laravel sites and CMS platforms for blogs, careers, events and lead capture.
- Took over **production server security** at the senior engineer's request (hardening, access control, port and mail-security review, monitoring) and handle deployments across PM2, NGINX, Docker and GitHub Actions.

Backend Engineer (Contract)

Dec 2025 – Feb 2026

Yemert — Abuja, Nigeria

- USSD platform (*965#) giving smallholder farmers crop insurance, produce sales and carbon credits from basic feature phones. Node.js/TypeScript, Express, Prisma, PostgreSQL, Redis, BullMQ.
- Built the **disbursement service** end to end — data model, REST API, OTP-authorised payouts, provider reconciliation and bulk disbursement — with the matching Next.js admin interface and smart bank pre-fill.
 - Integrated **Monnify dedicated virtual accounts** so farmers could fund wallets by bank transfer directly from the USSD menu, and added Monnify as a first-class provider across transaction records.
 - Shipped **telemetry endpoints** for user, policy and revenue reporting, wired them into the admin dashboard, and cleared the follow-up defect backlog to stabilise the flows.
 - Built the admin transaction endpoint with search, filtering and pagination, fixed an integer-overflow defect that broke phone-number search, and implemented the NIN collection flow with an environment-safe fallback.
 - Authored the team's weekly engineering reports and scoped the MoMo Rwanda integration for the following phase.

Junior Web Developer, Intern

Sept 2023 – Apr 2024

Bloom Digital Media Ltd — Abuja, Nigeria

- Contributed front-end and back-end features to live client projects in PHP/Laravel, JavaScript and Tailwind CSS under senior developer review; built a responsive academy site with an admin CMS, and assisted with NGINX configuration, deployments and mailbox provisioning.

EDUCATION

B.Sc. Computer Science — Federal University of Technology, Minna, Niger State

2024
